

Standards Change Request

Increase length of PATH_NAME keyword

SCR3-1064

Provenance:

Date: 2007-01-28

Author(s): R.Joyner (EN)

Working Group: Susan Slavney (lead)

Problem:

Based on the approval of SCR 3-1006, the length of PATH_NAME needs to be increased to accommodate longer directory names.

Current Urgency:

Priority is medium. This change is needed to rectify the discrepancy in the data dictionary.

Proposed Solution:

Increase the maximum length of the PATH_NAME keyword to 277 characters. The 277 characters will accommodate 8 directory names of 31 characters in length, 8 "/" characters used as delimiters, and 1 file name of 31 characters in length = 277 characters.

Impact Assessment:

The impact should be low. The Data Dictionary will need to be modified to change the maximum length of the above keyword.

Additional Information:

N/A

Requested Changes:

An updated element definition for the above keyword has been submitted.
