1 Introduction

1.1 Purpose and Scope

This software system test documents specific test procedures and reports test steps and results of the system level tests that demonstrate the PDS 2010 system deployed for Build 3a. It verifies that PDS 2010 system Build 3a is compliant with Build 3 requirements, and ensures that the system functions are without critical defects. Test Traceability Matrix can be found in the PDS 2010 Build 3a Test Plan Section 4.

For PDS 2010 Build 3a, the following Prototype Software will be deployed at the EN:

- Registry
- Ingest: Harvest, Catalog
- Preparation: Core, Design, Generate, Transform, Validate
- Report
- Search: Core, Service, User Interface
- Security
- Storage
- Transport

In future tests, the following Prototype Software will be deployed at the Discipline Nodes:

- Registry, Ingest, Preparation, Report

Detailed prototype release description document will be generated to facilitate and to detail the deployment activities.

Test resource will include EN developer to support unit testing, and Integration Team (which consists of EN and Node staff) to perform integration testing.

1.2 Document Revision

Revisions of this document will be held in the PDS Engineering Node website through the use of its document history functionality. Previous versions of this document can be accessed through the use of that tool.

2 Executive Summary

2.1 Assessment

The tools and services tested here work with the versions specified. However, changes to them and/or the information model broke tests that worked previously, and that is very likely to happen again.

2.2 Major Findings

All tested tools and services worked as described in the Service Software Requirements and Design documents above.

2.3 Success

Tools and services performed as documented.

2.4 Metrics

This section provides a summary of the test metrics

# of tests performed	# of tests passed	# of tests failed	# of high priority anomalies
29	29	1	0

3 Test Procedures

The following section lists procedures and results for the test cases identified as the suite of “PDS 2010 Build 3 system tests” in the PDS 2010 Build 3 Test Plan Section 3. These tests will be run as necessary to re-test the system after any software changes.

The test procedures assume the following software are installed locally:

- an XML-friendly web **browser**, e.g. firefox
- **curl**, a command-line utility to access a URL, used here to manipulate a registry. The Registry Service Guide has more information. This is native to most versions of unix.
- an **XML editor**, e.g. eclipse. This can be skipped, though not recommended.
- **Harvest**, <http://pds-engineering.jpl.nasa.gov/pds2010/development/3.0.0/ingest/harvest>
- **Validate**, <http://pds-engineering.jpl.nasa.gov/pds2010/development/3.0.0/preparation/validate>
- **Generate**, <http://pds-engineering.jpl.nasa.gov/pds2010/development/3.0.0/preparation/generate>
- **Catalog**, <http://pds-engineering.jpl.nasa.gov/pds2010/development/3.0.0/ingest/catalog>
- **Search**, <http://pds-engineering.jpl.nasa.gov/pds2010/development/3.0.0/search>

The **Registry**, <http://pds-engineering.jpl.nasa.gov/pds2010/development/3.0.0/registry/registry-service/>, can reside remotely or locally, controlled or uncontrolled. Local installation makes testing easier, but installation and configuration can be difficult.

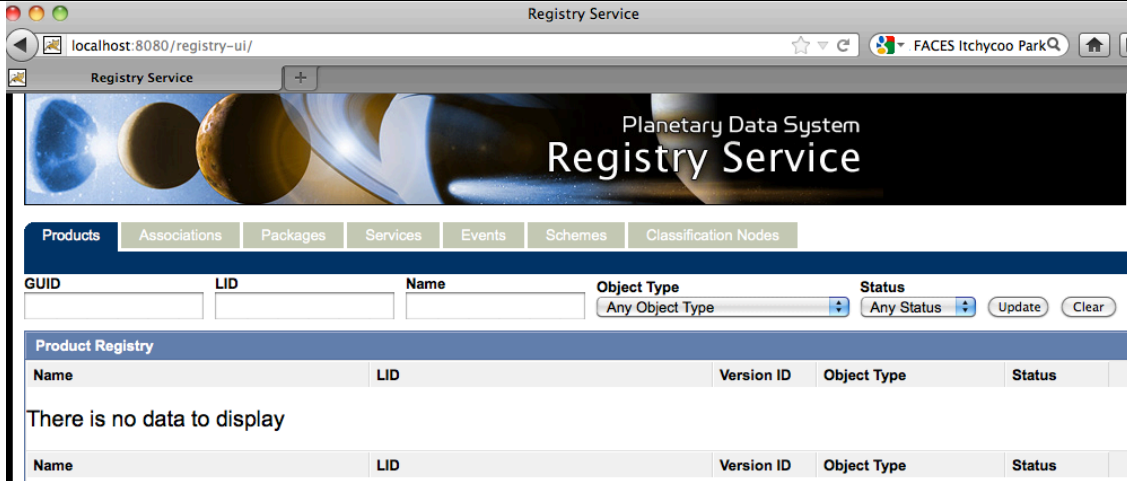

Please follow the installation instructions. For example, the Harvest and harvest-ctrl commands usually require editing to use the correct registry, and those two and Validate also require editing to set environment variable JAVA_HOME.

The tests are written for Unix, though running on Windows should require only simple changes.

In the test procedures below, globally replace:

<i>testDir</i>	directory where input files are extracted
harvest	If the registry is uncontrolled, nothing. Else: <code>harvest -uusername -ppassword</code> Also add “-k keystorePassword” depending on the registry configuration, e.g. if Harvest gives error “Keystore password must be specified”
curl	If the registry is uncontrolled, nothing. Else <code>curl -uusername:password -k</code>
http://localhost:8080 or https://potato.jpl.nasa.gov	Use the location of the registry

Test Case ID	SETUP for all tests
Description	This is not really a test.
Test Steps	Get PDS4test.build3.zip from the "Test Procedures Input" link at http://pds-engineering.jpl.nasa.gov/index.cfm?pid=145&cid=185 . Extract the input files: <pre>mkdir testDir cd testDir unzip PDS4test.build3.zip mkdir holdings</pre>

Harvest registered product holdings/minimallImage.xml because it has a <product_class> that matches one of harvestPolicy.xml's objectType. Step 4 shows the registration of the product referred to in minimallImage.xml as well as two extra products associated with this product: the metadata file (i.e. the label) minimallImage.xml and the data file i943630r.raw.

Step 4 shows associations to products with LIDs urn:nasa:pds:TESTING:investigation.MARS_PATHFINDER::1.0, urn:nasa:pds:TESTING:target.MARS, urn:nasa:pds:TESTING:instrument_host.MPFL, urn:nasa:pds:TESTING:instrument.IMP__MPFL

Description	Query and delete associations (not just products). When Harvest registers a product, it also registers associations to the XML label file and to the referenced data file. These associations (non-LID-based) can be deleted.

Comments	<p>catalog -mcompare does well but could be better. In step 2, the second file has only 1 extra token, which then causes a cascade of different line breaks. However, the tool shows all lines of the difference. It would be better to show only the different token plus a few tokens around it.</p>

Comments	<p>When validating voldesc.cat, catalog -mvalidate reports that the label fragment, e.g. file DATASET.CAT, "should not contain a PDS_VERSION_ID". Of course, such files must have PDS_VERSION_ID. This is a problem carried over from PDS3.</p>

Test Case ID	REG.T3
Description	Maintain policies for classes of artifacts, i.e. all classes of artifacts capture a base set of metadata, in the form of XML attributes: objectType, guid as well as metadata specific to each artifact class.
Test Steps	<p>In a browser,</p> <ul style="list-style-type: none"> http://localhost:8080/registry/extrinsics http://localhost:8080/registry/associations http://localhost:8080/registry/services http://localhost:8080/registry/schemes http://localhost:8080/registry/events http://localhost:8080/registry/packages
Test Results	<p>Specific results will differ, but every item in every class has XML attributes objectType, guid. Each class may have others attributes such as lid, name, home. There are no services yet.</p>  <pre>- <ns2:response numFound="1" start="1"> - <ns2:results> - <ns2:extrinsicObject description="Stolen from http://pdscm/2010/registry/registry-service/operate/index.html with attribute lid above changed for uniqueness" objectType="Product" name="Product 1234 v1" lid="testing.REG.T1" guid="testing.REG.T1.v1.0"> - <ns2:slot name="last-name" id="3302"> <ns2:value>Doe</ns2:value> </ns2:slot> - <ns2:slot name="first-name" id="3303"> <ns2:value>John</ns2:value> </ns2:slot> - <ns2:slot name="phone" id="3304"> <ns2:value>(818)222-2222</ns2:value> <ns2:value>(818)333-3333</ns2:value> </ns2:slot> </ns2:extrinsicObject> </ns2:results> </ns2:response></pre>

Test Case ID	REG.T6
Description	Allow replacement, approval, deprecation, undeprecation, and verification of registered artifacts.
Test Steps	<ol style="list-style-type: none"> 1. In a browser, <code>http://localhost:8080/registry/extrinsics/logicals/testing.REG.T2a</code> shows no current product has lid “testing.REG.T2a”. 2. <code>curl -X POST -H "Content-type:application/xml" -v -d @testRegistry/test.REG.T6a.xml</code> <code>http://localhost:8080/registry/extrinsics</code> 3. Repeat step 1 to see the lid

4. In a browser, <http://localhost:8080/registry-ui/>
Under "LID", enter "testing.REG.T2a". Click "Refresh". If that URL is not found, repeat step 1 and note the XML attribute "status".
5. `curl -X POST -H "Content-type:application/xml" -v http://localhost:8080/registry/extrinsics/testing.REG.T2a.v1.0/approve`
6. Repeat step 4 to see the Status
7. `curl -X POST -H "Content-type:application/xml" -v http://localhost:8080/registry/extrinsics/testing.REG.T2a.v1.0/deprecate`
8. Repeat step 4 to see the Status
9. `curl -X POST -H "Content-type:application/xml" -v http://localhost:8080/registry/extrinsics/testing.REG.T2a.v1.0/undeprecate`
10. Repeat step 4 to see the Status

Test Results

Step 1: The error message should be "No object found for lid: testing.REG.T2a", very much like REG.T1's step 2's output. If not,

`curl -X DELETE -v`

Step 2: Benign output messages without "ERROR", like REG.T1's step 5

Test Case ID	SCH.T5
Description	Search based on a sequence of open text keywords. Do so in a browser.
Test Steps	<p>Test BNDL.T4 populates the PDS4 database with PDS3 information. Compare the PDS4 (http://potato.jpl.nasa.gov/search-ui) and the PDS3 (http://pds.nasa.gov/tools/data-search) results for the following searches:</p> <ol style="list-style-type: none"> 1. mro spice 2. cassini cda 3. voyager plasma wave. In Refine Your Search, click "Comet SL9/Jupiter Collision" 4. mars digital elevation maps 5. neptune 6. jupiter images 7. corona 8. NEAR-A-SPICE-6-EROS/ORBIT-V1.0 (a specific data set ID)
Test Results	<p>All searches complete successfully. "Good" and "Bad" refer to PDS4 relative to PDS3:</p> <ol style="list-style-type: none"> 1. Good: PDS4 returns 1 extra result, the Instrument "SPICE KERNELS for MRO". However, ideally that result comes after the MRO SPICE dataset, but a general rule for ranking would be difficult.

	<p>2. Bad: PDS4 has 10 extra results, all obsoleted datasets.</p> <p>3. Probably good: no "Search Tool: Comet Data Searcher".</p> <p>4. Apparently, "digital elevation map" is not a commonly used term. Both have mostly irrelevant results Bad: PDS3 has the 2 best results, datasets "VO1/VO2 MARS VISUAL IMAGING SUBSYSTEM DIGITAL TERRAIN MODEL" and "MRO-M-HIRISE-5-DTM-V1.0". PDS4 does not have those at all.</p> <p>5. Good: 11 extra targets, 11 extra instruments. Avoided bad instrument LONG RANGE RECONNAISSANCE IMAGER on New Horizons. Maybe bad: Returned mission New Horizons. Bad: No search tools returned. The set up may be incorrect, as the PDS4 search in build 2C had 2 extra search tools.</p> <p>6. PDS4 returns 89 results; PDS3, 132 Probably good: avoiding dataset "EAR-J-KECK-3-EDR-SL9-V1.0", which seems preliminary, avoiding mission EPOXI, adding mission "NEW HORIZONS" Bad: no search tools</p> <p>7. Good: 3 missions SUISEI, VEX, ULY. Maybe good: Radio Science instruments.</p> <p>8. PDS3 returns 1 result. PDS4 returns 6918. PDS3's result is probably better.</p>
Comments	<p>This happens with PDS3 as well. After searching and then refining a search (clicking on something in the left column), if the user types a new search term in the middle of the page, the new search is actually a refinement, not a new search. I'd prefer either a new search or something on the web page indicating that the typed-in text will refine the current results. (This happened in going from step 3 to step 4 above) https://oodt.jpl.nasa.gov/jira/browse/PDS-86</p> <p>Superseded datasets appear, and search tools don't https://oodt.jpl.nasa.gov/jira/browse/PDS-125</p> <p>Search is handling slashes in the datasetID incorrectly for Step 4. The first item returned by search is "Data Set: unk", and the link from "unk" is an error. The dataset that should be returned is MR9/VO1/VO2-M-RSS-5-GRAVITY-V1.0 https://oodt.jpl.nasa.gov/jira/browse/PDS-134</p>

Test Case ID	SCH.T6, SCH.T7
Description	Search based on constraints on specific indexes, and narrow results based on more constraints. Support ordering of results based on specified criteria. Results returned as clickable URIs with metadata describing each URI.
Test Steps	<p>Compare the PDS4 (http://pdsbeta.jpl.nasa.gov/tools/data-search) and the PDS3 (http://pds.nasa.gov) results for the searches below. Clicking on the facets in the left column makes the comparison easier</p> <ol style="list-style-type: none"> 1. mission: mars global surveyor 2. target:mercury
Test Results	<p>All searches complete successfully. "Good" and "Bad" refer to PDS4 relative to PDS3:</p> <ol style="list-style-type: none"> 1. Good: much fewer non-MGS missions Bad: no search tools 2. Very similar results except no search tools

Description	Various requirements regarding security
Test Steps	(From http://pds-engineering.jpl.nasa.gov/pds2010/development/1.2.0/security/) The Security Service provides the authentication and authorization functions for the PDS 2010 system. The intent of this service is to control access to interfaces and services that require authentication and authorization (e.g., Monitor, Report, Registry interfaces, etc.). The functionality for this service is satisfied by the open source software package OpenDS, which is a directory service supporting the Lightweight Directory Access Protocol (LDAP).
