PDS4 Essential Core for the Version 1.0 Public Release February 8, 2013

I. Purpose

The purpose of this document is to serve as an internal memo for the PDS Management Council in order to agree on the minimal set of capabilities required to release version 1.0 publicly to the PDS data providers.

II. Introduction and Scope

Version 1.0 of PDS4 is the first public release. The scope of the release is to *supportdata* providers and Discipline Nodes in developing PDS4 data products both for new missions and data migration. Previous releases of PDS4 have been scoped to support the LADEE and MAVEN missions as early adopters as well as internal testing by PDS and the IPDA. Future, incremental releases will target data users as PDS4 data are available within the PDS. The minimum PDS4 capabilities that are essential for the MC to authorize the first incremental "public" release, V1.0, of PDS4 includes:

- A stable subset of product classes for data provider use¹.
- Tools and services sufficient to meet the needs of data providers, focused on the needs of LADEE & MAVEN².
- Sufficient documentation to support the above³.

Regarding the contents of the Information Model, the expectation is that all classes identified as part of the essential "core" will be sufficiently stable and backwards compatible with future iterations of the Information Model (IM).

Regarding the system portion of the essential "core", the expectation is that the essential services and tools will be functional, wherefuture iterations will produce improvements in ease of use, scope, and efficiency. We are looking for good enough, not perfect.

While at this stage we are identifying the minimum essential elements, the internal review may identify addition elements to be identified as essential in version 1.0 if they meet the expectations above. (This allows us to identify as reasonably stable additional classes beyond the minimum if they mature sufficiently rapidly).

¹The primary driver in determining which classes need to be sufficiently mature to afford long-term stability is based on the needs of LADEE & MAVEN.

²Tools and services designed for end user support are specifically not included in the initial public release.

³A compilation of policies, rules, and other PDS4 constraints that are both given explicitly in the Information Model and Data Dictionary and can be derived from the Information Model.

III. Timeline

The 3b build that is planned for March 2013 will include the full information model, schema, documentation and available PDS4 systems tools and services. Following the build will be an *Acceptance Test* process and review. Should it be accepted for release, a subset will be identified as "essential" for Version 1.0and posted on the PDS4 page [1] of the main PDS web site.

The following identifies the timeline:

- End of March: release 3b. Includes the full information model, schema, documentation, and available PDS4 system tools and services. A subset of release 3b will be identified as "essential" for the Version 1.0 "public" release.
- April June: Acceptance testing and review by the PDS.
- July: Assuming a favorable review and successful lien resolution, release Version 1.0 of PDS4. It will include the full information model, schema, documentation, and available PDS4 system tools and services. A subset of Version 1.0 will be identified as "essential".

IV. Core Information Model

The classes from the PDS4 Information Model being proposed for the Version 1.0 candidate release are summarized in the following table. A complete detailed breakout can be found in Appendix A. The Data Design Working Group (DDWG) made the initial determination based on those classes needed to support the LADEE and MAVEN missions, primarily the 2D image, the table classes, and the Product Observational component classes.

The concept of backwards compatibility has been taken into consideration for the determination of what classes are to be included in the initial release and those that can be delayed. For example, the Array_3D classes are subclasses of the Array class but if necessary can be delayed to V1.1 since they are backwards compatible by definition. In other words, if the Array class is accepted for Version 1.0, then only the additional features provided by the Array_3D subclasses need to be reviewed since their core components were previously accepted.

Data Structures

The four fundamental data structure classes define the structures of all PDS4 digital objects.

Class	Subclasses	Description
Array	Array_2D,	The Array class defines a homogeneous N-
	Array_2D_Image	dimensional array of scalars.

	Array_2D_Spectrum ¹ Array_2D_Map ¹ Array_3D ¹ Array_3D_Spectrum ¹	
Table (Base)	Fixed-width Character Table, Fixed-width Binary Table	The Table class defines a set of repeating records, each with aheterogeneous set of fields.
Parsable Byte Stream	Delimited Table, Header, SPICE Kernel, Stream Text	The Parsable Byte Stream class defines byte streams that have standard parsing rules.
Encoded Byte Stream	Encoded_Image, PDF/A	The Encoded Byte Stream class defines byte streams that must be decoded by software before use. These byte streams must only use standard encodings.

¹Thesedata structures require active node advocacy to be included in V1.0, otherwise they will slip to V1.1.

Product

A Product is a uniquely identified information object that is managed by the registry. An example of an information object is a digital image and a label that describes the image.

Class	Subclasses	Description
Product Observational	N/A	A Product_Observational is a set of one or more information objects produced by an observing system.
Product Document	N/A	The Product Document class describes a document.
Product XML_Schema	N/A	The Product_XML_Schema is used to describe XML schemas.

Aggregates

The aggregate products are used to group a set of data or observational products.

Class	Subclasses	Description	
Product Collection	N/A	A Product_Collection has a table of references to one or more data products.	
Product Bundle	N/A	A Product_Bundlehas a table of references to one or more collections.	

V. Essential Core Software

The core software for the Version 1.0 candidate release consists of tools and services to support PDS4 data validation, registration, and search. The software includes the following:

Local Data Dictionary Generation

Software for generating a Local Data Dictionary (LDD) that can be referenced by product labels. Satisfied by the following component:

Component	Capabilities
LDDTool	 Supports generating Local Data Dictionary XML Schema and Schematron files from a populated template.
	• Supports generating additional files for merging the LDD into the Information Model.

Label and Data Validation

Software for validating PDS4 product labels and product data. The associated specific schema for the product label specifies syntactic and semantic constraints. The product label itself specifies the constraints for the data. Satisfied by the following component:

Component	Capabilities
Validate Tool	Supports validation of PDS4 product labels against the
	associated XML Schema and Schematron files.
	See the Preparation Tools SRD/SDD [2] for more details.

Data Registration

Software for capturing metadata describing data products registered in the PDS data system. Satisfied by the following components:

Component	Capabilities	
Registry Service	• Supports registration of PDS products as defined in the PDS Information Model.	
	 Supports managing registered products including updating, versioning and deleting. 	
	 Supports querying for registered products. See the Registry Service SRD/SDD [3] for more details. 	
Harvest Tool	 Supports retrieval of metadata from PDS products and registration of that metadata with the Registry Service. See the Harvest Tool SRD/SDD [4] for more details. 	

Data Search

Software for finding data products registered in the PDS data system. Satisfied by the following components:

Component	Capabilities
Search Service	 Supports indexing of metadata for registered catalog-level* PDS products from the Registry Service. Supports query requests for registered PDS3/PDS4 catalog-level* PDS products and retrieval of query results. Supports the PDS and PDAP search protocols for specifying query criteria. *Catalog-level products include Mission/Investigation, Instrument Host, Instrument, Target, Data Set and Bundle/Collection products. It does not include Observational products. See the Search Service SRD/SDD [5] for more details.
Search User Interface	 Provides a graphical user interface integrated with the PDS web site (http://pds.nasa.gov/) for submitting query requests and retrieving query results to/from the Search Service. Supports query requests for and display of returned query results for PDS3/PDS4 catalog-level PDS products. See the Search Service SRD/SDD [5] for more details.

VI. Non-EssentialSoftware

In addition to the core software described above, the following functions provide additional support for preparing PDS4 data beyond the essential core software. These will be included as part of build 3b, but are considered not critical to supporting the primary scope of the public release.

Label Generation

Software for generating PDS4 labels from existing PDS3 labels in bulk. Although initially intended for migration, it should be adaptable to generating labels for new PDS4 data products. Satisfied by the following component:

Component	Capabilities	
Generate Tool	• Supports generation of PDS4 product label from PDS3	
	product label or other metadata source.	

Label and Data Transformation

Software for reading and writing PDS4 data products that also includes transforming data and label files into various formats. Satisfied by the following components:

Component	Capabilities
PDS4 Tools	 Supports reading and writing PDS4 data, withsupport for Array 2D Image, Binary Table, Character Table and Delimited Table.

Component	Capabilities		
Transform Tool	 Supports transforming PDS3 and PDS4 product labels and 		
	data into common formats, including:		
	 PDS4 product label to Parameter Value Language 		
	(PVL)		
	 PDS4 Array 2D Image to BMP, GIF, JPEG, JPEG2000, PNG, PNM, RAW, TIFF and WBMP PDS3 Image to BMP, GIF, JPEG, JPEG2000, 		
	PNG, PNM, RAW, TIFF and WBMP		
	As of the writing of this document, additional transformations listed in the		
	Format Transformations [6] spreadsheet have yet to be prioritized by Node		
	staff. This prioritization will help identify candidate transformation		
	support for the Build 3b release and beyond.		

VI. Core Documentation

The documentation being proposed for the Version 1.0 candidate release consists of the Information Model Specification, Data Dictionary, Concepts Document, Glossary, Standards Reference, and Data Providers Handbook.

Appendix A – Core Classes

The following table includes the classes for candidate release V1.0 and the future releases. The legend provides a brief description of each of the color codes.

Context classes such as instrument and investigation are included in the Version 1.0 candidate release since they are being used for the LADEE and MAVEN missions. However the DDWG did not believe that a formal review was required since they are managed internally to the PDS and are already being used. Any change to a context class will have minimal impact on an associated data product because data products reference context products using unique identifiers.

Most of the remaining classes are held for candidate release V1.1. These classes are currently under development and many are mature, however further testing is desired.

	PDS4 Classes and Candidate Releases					
	Name	Version	Steward	Description		
				The Array class defines a homogeneous N-dimensional array of		
				scalars. The Array class is the parent class for all n-dimensional arrays		
1	Array	V1.0	pds	of scalars.		
				The Array 2D class is the parent class for all two dimensional array		
2	Array_2D	V1.0	pds	based classes.		
				The Array 2D Image class is an extension of the Array 2D class and		
3	Array_2D_Image	V1.0	pds	defines a two dimensional image.		
				The Array 2D Map class is an extension of the Array 2D class and		
4	Array_2D_Map	V1.0	pds	defines a two dimensional map.		
				The Array 2D Spectrum class is an extension of the Array 2D class and		
5	Array_2D_Spectrum	V1.0	pds	defines a two dimensional spectrum.		
				The Array 3D class is the parent class for all three dimensional array		
6	Array_3D	V1.0	pds	based classes.		
				The Array 3D Spectrum class is an extension of the Array 3D class and		
7	Array_3D_Spectrum	V1.0	pds	defines a three dimensional spectrum.		
				The Axis Array class is used as a component of the array class and		
8	Axis_Array	V1.0	pds	defines an axis of the array.		
				The Band_Bin class specifies the characteristics of an individual		
9	Band_Bin	V1.0	img	spectral band in a spectral qube.		
				The Band_Bin_Set class contains the spectral characteristics for all the		
	Band_Bin_Set	V1.0	img	spectral bands in a qube.		
11	Bundle	V1.0	pds	The Bundle class describes a collection of collections.		
				The Bundle Member Entry class provides a member reference to a		
12	Bundle_Member_Entry	V1.0	pds	collection.		
13	Byte_Stream	V1.0	pds	The Byte Stream class defines a stream of bytes.		
				The Citation_Information class provides specific fields often used in		
				citing the product in journal articles, abstract services, and other		
	Citation_Information	V1.0	pds	reference contexts.		
	Collection	V1.0	pds	The Collection class provides a description of a set of products.		
16	Context_Area	V1.0	pds	The Context Area provides context information for a product.		
17	Discipline_Area	V1.0	pds	The Discipline area allows the insertion of discipline specific metadata.		
		=	l .	The Display_2D_Image class provides attributes to enable the display		
	Display_2D_Image	V1.0	pds	of a 2 dimensional image.		
19	Document	V1.0	pds	The Document class describes a document.		
20	Document_File	V1.0	pds	The Document File class describes a file which is a part of a document.		

				The Document Format provides a description of a variant of a logical
				document that is stored in a specific format. For example the PDS
21	Document Format	V1.0	pds	· · · · · · · · · · · · · · · · · · ·
21	Document_Format	V1.0	pus	Standards Reference has HTML and PDF formatted versions. The Document Format Set class is a set consisting of a document
22	Document Format Cat	V1.0	pds	format and associated files.
22	Document_Format_Set	V1.0	pus	The Element Array class is used as a component of the array class and
22	Flament Array	V1 0	nde	
	Element_Array	V1.0	pds	defines an element of the array.
				The Encoded Byte Stream class defines byte streams that must be
				decoded by sofware before use. These byte streams must only use
24	Francisco Distriction			standard encodings. The Encoded Byte Stream class is the parent class
24	Encoded_Byte_Stream	V1.0	pds	for all encoded byte streams.
			١.	The Encoded Image class is used for ancillary images in standard
25	Encoded_Image	V1.0	pds	formats, such as JPEG.
			١.	The External_Reference class is used to reference a source outside the
26	External_Reference	V1.0	pds	PDS registry system.
l				The Field class defines a field of a record and is the parent class of all
-	Field	V1.0	pds	specific field classes.
28	Field_Binary	V1.0	pds	The Field_Binary class defines a field of the record.
				The Field_Bit class provides parameters for extracting one field out of
				a string of bytes which contains packed data (that is, data values either
	Field_Bit	V1.0	pds	smaller than a single byte, or crossing byte boundaries, or both.
-	Field_Character	V1.0	pds	The Field_Character class defines a field of the record.
31	Field_Delimited	V1.0	pds	The Field_Delimited class defines a field of the record.
				The Field Statistics class provides a set of metrics for a column formed
32	Field_Statistics	V1.0	pds	by a field in a repeating record.
33	File	V1.0	pds	The File class consists of attributes that describe a file in a data store.
34	File_Area	V1.0	pds	The File_Area class defines a File and its component data objects.
				The File Area Binary class describes a file that contains an encoded
35	File_Area_Binary	V1.0	ops	byte stream.
	File_Area_Checksum_Manifes			The File Area Checksum Manifest class describes a file that contains a
36	t	V1.0	ops	two column table for file references and checksums.
				The File Area Encoded Image class describes a file that contains an
37	File_Area_Encoded_Image	V1.0	pds	Encoded Image object.
				The File Area Inventory class describes a file and an inventory
38	File_Area_Inventory	V1.0	pds	consisting of references to members.
		_	_	The File Area Observational class describes, for an observational
				product, a file and one or more tagged_data_objects contained within
39	File_Area_Observational	V1.0	pds	the file.
				The File Area Observational Supplemental class describes, for an
	File_Area_Observational_Supp			observational product, additional files and one or more
40	lemental	V1.0	pds	tagged_data_objects contained within the file.
			-	

41 File_Area_SPICE_Kernel V1.0 pds					
The File Area Text class describes a file that contains a text stream object. The File Area Transfer Manifest class describes a file that contains a two column table that maps the logical identifers and version ids of products to their file specification names. The File Area SML Schema V1.0 ops products to their file specification names. The File Area SML Schema Class describes a file that contains a resource used for the PDS4 implementation into XML. The File Area SML Schema Class describes a faile that contains a resource used for the PDS4 implementation into XML. The Internal Reference V1.0 pds The Header class describes a data object header. The identification area consists of attributes that identify and name an object. The Internal Reference class is used to cross-reference other products in the PDS registry system. The Investigation Area class provides information about an investigation (mission, observing campaign or other coordinated, large-scale data collection effort). The Investigation Area class provides the details of one round of modification Detail V1.0 pds The Modification Detail V1.0 pds The Modification for the product. The first, required, instance of this class documents the date the product was first registered. The Modification for the product was first registry system. The Observation area consists of attributes that provide information about the object. The Observation area consists of attributes that provide information about the object. The Observing System Component class references one or more subsystem used to collect data. A subsystem can be an instrument, not, instrument, or any other similar product. Each subsystem is categorized as either a sensor or a source, Observing System Component class references one or more subsystem is categorized as either a sensor or a source, Observing System Component class contains field definitions for extracting packed Data_Fields The Packed_Data_Fields class contains field definitions for extracting packed data from the associat				١. 		1	1	T
				A Product_Bundle is an aggregate product and has a table of
61	Product_Bundle	V1.0	pds	references to one or more collections.
				A Product_Collection has a table of references to one or more basic
62	Product_Collection	V1.0	pds	products. The references are stored in a table called the inventory.
				A Product Document is a product consisting of a single logical
63	Product_Document	V1.0	pds	document that may be comprised of one or more document formats.
				The Product File Text consists of a single text file with ASCII character
64	Product_File_Text	V1.0	pds	encoding.
				A Product_Observational is a set of one or more information objects
65	Product_Observational	V1.0	pds	produced by an observing system.
66	Product_SPICE_Kernel	V1.0	pds	The Product SPICE Kernel class defines a SPICE kernel product.
				The Product_XML_Schema describes a resource used for the PDS4
67	Product_XML_Schema	V1.0	pds	implementation into XML.
				The Record class defines a record of a file and is the parent class of all
68	Record	V1.0	pds	specific record classes.
				The Record_Binary class is a component of the table class and defines
69	Record_Binary	V1.0	pds	a record of the table.
				The Record_Character class is a component of the table class and
70	Record_Character	V1.0	pds	defines a record of the table.
				The Record_Delimited class is a component of the delimited table
71	Record_Delimited	V1.0	pds	(spreadsheet) class and defines a record of the delimited table.
				The Reference_List class provides lists general references and cross-
				references for the product. References cited elsewhere in the label
72	Reference_List	V1.0	pds	need not be repeated here.
				The Special Constants class provides a set of values used to indicate
73	Special_Constants	V1.0	pds	special cases that occur in the data.
74	SPICE_Kernel	V1.0	pds	The SPICE Kernel class describes a SPICE object.
75	Stream_Text	V1.0	pds	The Stream text class defines a text object.
				The Table Base class defines a heterogeneous repeating record of
				scalars. The Table Base class is the parent class for all heterogeneous
76	Table_Base	V1.0	pds	repeating record of scalars.
				The Table Binary class is an extension of table base and defines a
77	Table_Binary	V1.0	pds	simple binary table.
				The Table Character class is an extension of table base and defines a
78	Table_Character	V1.0	pds	simple character table.
				The Table_Delimited class defines a simple table (spreadsheet) with
79	Table_Delimited	V1.0	pds	delimited fields and records.
	_			The Target_Identification class provides detailed target identification
80	Target_Identification	V1.0	pds	information.

81	Time_Coordinates	V1.0	pds	The Time_Coordinates class provides a list of time coordinates.
				The Uniformly_Sampled class provdes parameters for a uniformly
82	Uniformly_Sampled	V1.0	pds	sampled table.
				The Vector class provides the components of either a velocity or
83	Vector	V1.0	pds	position vector.
				The Vector_Cartesian_3_Base class is the parent class of 3 element
84	Vector_Cartesian_3	V1.0	pds	cartesian vectors.
	Vector_Cartesian_3_Accelerat			The Vector_Cartesian_3_Acceleration class is a 3 element cartesian
85	ion	V1.0	pds	vector for acceleration coordinates.
				The Vector_Cartesian_3_Pointing class is a 3 element normalized
86	Vector_Cartesian_3_Pointing	V1.0	pds	cartesian vector for pointing.
				The Vector_Cartesian_3_Position class is a 3 element cartesian vector
87	Vector_Cartesian_3_Position	V1.0	pds	for position coordinates.
				The Vector_Cartesian_3_Velocity class is a 3 element cartesian vector
88	Vector_Cartesian_3_Velocity	V1.0	pds	for velocity coordinates.
89	Vector_Component	V1.0	pds	The Vector_Component class provides a component of a vector.
				The XML Schema class defines a resource used for the PDS4
90	XML_Schema	V1.0	pds	implementation into XML.
				The Agency class provides a description of an entity that provides
				regional or national level governance over nodes within the federated
91	Agency	Internal	pds	Planetary Data System.
				The Data Set PDS3 class is used to capture the data set information
92	Data_Set_PDS3	Internal	ops	from the PDS3 Data Set Catalog.
				The DD_Association class defines the association between two classes
93	DD_Association	Internal	ops	or a class and an attribute in a data dictionary.
				The DD_Association_External class defines the association between
				classes and attributes within the local data dictionary and those
_	DD_Association_External	Internal	ops	external to the local data dictionary.
95	DD_Attribute	Internal	ops	The DD_Attribute class defines an attribute for a data dictionary.
l _				The DD_Attribute_Full class provides a more complete definition of an
_	DD_Attribute_Full	Internal	ops	attribute in the data dictioonary.
97	DD_Class	Internal	ops	The DD_Class class defines a class for a data dictionary.
		l		The DD_Class_Full class provides a more complete definition of a class
98	DD_Class_Full	Internal	ops	for a data dictionary.
	DD D : 111 V/1	l		The DD_Permissible_Value class lists permissible values and their
99	DD_Permissible_Value	Internal	ops	meanings.
				The DD_Permissible_Value_Full class lists permissible values, their
100	DD_Permissible_Value_Full	Internal	ops	meanings, and the dates when active.

				The DD_Value_Domain class defines an attribute's permissible values
101	DD_Value_Domain	Internal	ops	and their constraints.
				The DD_Value_Domain_Full class provides a more complete definition
102	DD Value Domain Full	Internal	ops	of a attribute's value domain.
				The External_Reference_Extended class is used to reference a source
				outside the PDS registry system. This extension is used in the local data
103	External_Reference_Extended	Internal	ops	dictionary.
				The Facility class provides a name and address for a terrestrial
104	Facility	Internal	pds	observatory or laboratory.
				The File Area Service Description class describes a file that contains a
105	File_Area_Service_Description	Internal	ops	service description.
				The Ingest LDD class provides a form for collecting class and attribute
106	Ingest_LDD	Internal	ops	definitions.
	0		i i	The Instrument class provides a description of a phyiscal object that
107	Instrument	Internal	pds	collects data.
				The Instrument Host class provides a description of the phyiscal object
108	Instrument_Host	Internal	pds	upon which an instrument is mounted.
				The Instrument Host class provides a description of the phyiscal object
				upon which an instrument is mounted. This class captures the PDS3
109	Instrument_Host_PDS3	Internal	ops	catalog Instrument Host information.
				The Instrument class provides a description of a phyiscal object that
				collects data. This class captures the PDS3 catalog Instrument
110	Instrument_PDS3	Internal	ops	information.
				The Investigation class provides a description of activities involved in
111	Investigation	Internal	pds	the collection of data.
				The Mission PDS3 class describes an activity involved in the collection
112	Mission_PDS3	Internal	ops	of data. This class captures the PDS3 catalog Mission information.
				The Node class provides a description of an entity that provides local
113	Node	Internal	pds	governance within the federated Planetary Data System.
				The Other class provides a description of activities involved in the
114	Other	Internal	pds	collection of data which are not otherwise modeled.
				The PDS Affiliate class provides a description of a person who has an
				association with the planetary science community and has access to
115	PDS_Affiliate	Internal	pds	PDS resources not normally allowed to the general public.
				The PDS_Guest class is the default description of a person who has an
				association with the planetary science community and who has the
116	PDS_Guest	Internal	pds	most limited access to PDS resources.
				The Product Attribute Definition provides an attribute definition in XML
117	Product_Attribute_Definition	Internal	ops	encoding.
				The Product Class Definition provides a class definition in XML
118	Product_Class_Definition	Internal	ops	encoding.
			l .	The Product Context class describes something that provides context
119	Product_Context	Internal	pds	and provenance for an observational product.
		l		The Data Set PDS3 product is used to create proxy labels for the data
120	Product_Data_Set_PDS3	Internal	ops	sets in the PDS3 Data Set catalog.

	Product Instrument Host PD			An Instrument Host product describes an instrument host. This product
121		Internal	ops	captures the PDS3 catalog instrument host information.
			Оро	An Instrument product describes an instrument. This product captures
122	Product Instrument PDS3	Internal	ops	the PDS3 catalog instrument information.
				An Mission product describes a mission. This product captures the
123	Product Mission PDS3	Internal	ops	PDS3 catalog mission information.
			- 1	The Product Proxy PDS class defines a product with enough
124	Product_Proxy_PDS3	Internal	ops	information to to register a PDS3 data product.
	_ /_			The Product Subscription PDS3 class provides the list of subscriptions
125	Product_Subscription_PDS3	Internal	ops	for a PDS3 subscriber.
				A target product describes a target. This product captures a reduced
126	Product_Target_PDS3	Internal	ops	set of the PDS3 catalog target information.
				A Product Volume PDS3 product captures the PDS3 volume
127	Product_Volume_PDS3	Internal	ops	information.
				A Product Volume Set PDS3 product captures the PDS3 volume set
128	Product_Volume_Set_PDS3	Internal	ops	information.
129	Resource	Internal	pds	The Resource class provides a description of a web resource.
				The Subscriber PDS3 class provides the name of the subscriber and
130	Subscriber_PDS3	Internal	ops	their subscription list.
				The Target class provides a description of a phyiscal object that is the
131	Target	Internal	pds	object of data collection.
				The Target class provides a description of a phyiscal object that is the
				object of data collection. This class captures the PDS3 catalog Target
132	Target_PDS3	Internal	ops	information.
				The Telescope class provides coordinates and parameters for
133	Telescope	Internal	pds	terrestrial, ground-based telescopes.
				The Volume_PDS3 class is used to capture the volume information
134	Volume_PDS3	Internal	ops	from the PDS3 Data Set Catalog.
				The Volume_Set_PDS3 class is used to capture the volume set
135	Volume_Set_PDS3	Internal	ops	information from the PDS3 Data Set Catalog.
				The Array 3D Image class is an extension of the Array 3D class and
136	Array_3D_Image	V1.1	pds	defines a three dimensional image.
				The File Area Browse class describes a file and one or more
137	File_Area_Browse	V1.1	pds	tagged_data_objects contained within the file.
				The Group class defines a group of fields and is the parent class of all
	Group	V1.1	pds	specific group classes.
_	Group_Field_Binary	V1.1	pds	The Group_Field_Binary class allows a group of table fields.
140	Group_Field_Character	V1.1	pds	The Group_Field_Character class allows a group of table fields.

141	Group_Field_Delimited	V1.1	pds	The Field_Group_Delimited class allows a group of delimited fields.
	G. 6 ap 16.a_ 2 e		Puo	The Product Browse class defines a product consisting of one encoded
142	Product_Browse	V1.1	pds	byte stream digital object.
	_			The Product DIP_Deep_Archive class defines a product for the
143	Product_DIP_Deep_Archive	V1.1	ops	Dissemination Information Package for the deep archive.
				The Product SIP class defines a product for the Submission Information
144	Product_SIP	V1.1	ops	Package.
				The Product Thumbnail class defines a product consisting of one
145	Product_Thumbnail	V1.1	pds	encoded byte stream digital object.
				The Alias class provides a single alternate name and identification for
146	Alias	V0.3b	pds	this product in this or some other archive or data system.
				The Alias_List class provides a list of paired alternate names and
				identifications for this product in this or some other archive or data
147	Alias_List	V0.3b	pds	system.
				The Archival Information Package (AIP) class defines an Information
				Package consisting of the Content Information and the associated
				Preservation Description Information (PDI), which is preserved within
4.40	Analisad Jafannakian Badaan	\		an archive that conforms to the Open Archive Information System
148	Archival_Information_Package	VU.30	ops	(OAIS) Reference Model.
140	Array 2D Mayio	V0.3b	pds	The Array 3D Movie class is an extension of the Array 3D class and defines a movie as a set of two dimensional images in a time series.
149	Array_3D_Movie	VU.3D	pus	The Cartography class is a placeholder for soon forthcoming Imaging
150	Cartography	V0.3b	img	cartography classes.
130	Cartography	VO.35	11116	The Checksum_Manifest class defines a two column table for file
				references and checksums. The table structure is compatible with the
151	Checksum Manifest	V0.3b	ops	output from an MD5 checksum utility.
			- 1	The Dissemination Information Package Deep Archive class is an
				Information Package derived from one or more AIPs and is received by
152	DIP_Deep_Archive	V0.3b	ops	the National Space Science Data Center (NSSDC).
				The Dissemination Information Package (DIP) class defines an
	Dissemination_Information_P			Information Package, derived from one or more AIPs, that is received
153	ackage	V0.3b	ops	by a consummer.
				The Encoded Binary class describes a binary encoded byte stream. This
				class is used to describe files in the repository that are being registered
154	Encoded_Binary	V0.3b	pds	using Product_File_Repository.
			l .	The Encoded Header class describes a header that has been encoded
	Encoded_Header	V0.3b	pds	using an encoding scheme that is compliant to an external standard.
156	Geometry	V0.3b	pds	The Geometry class groups geometry information.
				The Information Package class defines the Information Package as
157	Information Dackage	V0.3b	000	described in the OAIS Reference Model and is the parent class of all
15/	Information_Package Information Package Compo	VU.3D	ops	specific IP classes. The Information Package Component class associates a Bundle,
150	nent	V0.3b	ons	Collections or Basic Products with Checksum and Storage Manifests.
130	пен	v0.30	ops	The NSSDC Information class provides identification information for
150	NSSDC	V0.3b	ops	data submitted to the NSSDC.
133	110000	10.50	- P3	The Product AIP class defines a product for the Archival Information
160	Product AIP	V0.3b	ops	Package.
		. 0.00	1-6-	·

				The Product DIP class defines a product for the Dissemination
161	Product DIP	V0.3b	ops	Information Package.
101	TTOUGET_DIT	V0.30	Орз	The Product File Repository class consists of a single text file. This
162	Product_File_Repository	V0.3b	ops	product is used to register a file in a repository.
102	Froduct_rife_Repository	VU.3D	υμι	The Product Service class defines a product for registering services.
				·
1.63	Duradurat Comica	VO 21-		Service descriptions from this product are used to register services as
163	Product_Service	V0.3b	ops	intrinsic registry objects.
1.54				Product Software is a product consisting of a set of one or more
164	Product_Software	V0.3b	ops	software formats.
				The Product Update class defines a product consisting of update
165	Product_Update	V0.3b	pds	information and optional references to other products.
				The Product_Zipped is a product with references to other products.
				The referenced products and all associated products and files are
166	Product_Zipped	V0.3b	ops	packaged into a single ZIP file.
				The Quaternion class models a mathematical construct that consists
				of four individual numeric components. Quaternions are a convenient
				mechanism for encapsulating orientation information since they
				require only four units of numeric storage, as opposed to the nine
167	Quaternion	V0.3b	pds	needed for a rotation matrix.
				The Quaternion_Component class provides a component of a
168	Quaternion_Component	V0.3b	pds	quaternion.
			İ	The Service Description class defines a file that contains a standardized
169	Service_Description	V0.3b	ops	service specification.
	Software	V0.3b	ops	The Software class describes a software product
			'	The Software Script class provides a description of a software code
171	Software_Binary	V0.3b	ops	that is stored as a compiled binary file.
	_ ,			The Software Script class provides a description of a software code
172	Software_Script	V0.3b	ops	that is stored as a script.
		101010	1	The Software Script class provides a description of a software code
173	Software_Source	V0.3b	ops	that is stored as source code.
173	301tWare_30arec	10.35	0 00	The Submission Information Package (SIP) class is an Information
				Package that is delivered by a Data Provider to an archive that
	Submission_Information_Pack			conforms to the Open Archive Information System (OAIS) Reference
174		V0.3b	0.00	Model for use in the construction of one or more AIPs.
174	age	VU.3D	ops	
175	Tolomoter, Dove	VO 25	ima	The Telemetry_Parameters class contains downlink-related attributes
1/5	Telemetry_Parameters	V0.3b	img	used primarily during mission operations.
				The terminological_entry class provides the name (designation) and
1/6	Terminological_Entry	V0.3b	ops	definition of the attribute in a specified natural language.
				The Transfer_Manifest class defines a table that maps product LIDVIDs
-	Transfer_Manifest	V0.3b	ops	to the file_specificaition_names of the products' XML label files.
178	Update	V0.3b	pds	The Update class consists of update information.
	Update_Entry	V0.3b	pds	The Update Entry class provides the date and description of an update.
180	Zip	V0.3b	pds	The Zip class describes a zip file.

Appendix B – Other Resources for Core Services / Tools

The PDS is continuing to maintain a list of the desired tools and services in an offline matrix. The PDS4 Integrated Tool List [7] is available from the EN web site and will continue to be discussed at the March PDS MC meeting to plan future releases.

The Release Description Document (RDD) [8] for the Build 3a release, details the total suite of PDS4 software released to date.

Appendix D – Revision History

01/14/2013: Initial version.

• Node comments posted at the EN web site [9].

02/08/2013: Key updates, based on comments, are as follows:

- Restructured document to include purpose, scope, and other overview information.
- Scoped release to focus on PDS4 data provider support.
- Added Array 3D Spectrum as part of V1.0.
- Separated critical software from non-critical software to support data provider scope.
- Updated software tool descriptions.
